Inheritance tax and SIPP

Inheritance Tax: Shareholdings in Thrive Renewables plc qualify for Business Property Relief (BPR) if held for more than two years. BPR provides relief from inheritance tax on the shareholder's death, placing BPR shareholdings outside of the shareholder's estate for inheritance tax purposes. This information is correct as at our publication date but please note that tax legislation is complex and can change so you should take your own tax advice.

Self-Invested Personal Pension (SIPP): It is possible to hold investments in Thrive Renewables plc through some full service Self-Invested Personal Pension, or SIPP, providers. For more information, talk to your SIPP provider or financial advisor if you have one. Or contact us for a list of SIPP providers who have told us they can accept investments in Thrive Renewables plc.

Important Notice

Past performance is no indication of future performance. As with all investments, investing in Thrive bonds or shares comes with risk and investors should educate themselves before making a decision to invest. You should speak to an independent financial advisor if you need help making this assessment. The information contained in this fact sheet is correct to the best knowledge of the directors of the company, however any investment decision should not be made on this information alone. Further information about Thrive Renewables plc can be found at www.thriverenewables.co.uk.

Thrive Renewables plc is an unlisted

company and shares in Thrive Renewables

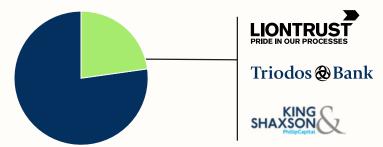

plc aren't traded on a recognised investment exchange such as the London Stock Exchange or the Alternative Investment Market. Buying and selling of shares is facilitated through a matched bargain market run monthly by a share matching platform. This means share transactions can be infrequent and there is no guarantee that you will find a buyer for your shares nor what price they will be willing to pay.

The value of your investment and any income from it may fall and you may get back less than, or none of, the amount you invested. The Directors' Valuation will always be published on the Thrive Renewables website.

This financial promotion was approved on 18 December 2025 by Triodos Bank UK Limited, registered in England and Wales with no. 11379025. Registered Office: Deanery Road, Bristol BS1 5AS, United Kingdom. Authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority under registration number 817008.

Thrive Renewables plc ownership

A community of conscious investors – both individuals and institutions

- Professional/institutional investors including Lion Trust, Triodos Bank, King & Shaxson
- Individuals
- Impact Portfolio describing Thrive's share of projects owned plus the projects Thrive is funding (adjusted proportionally where Thrive's funding is a minority of a project's overall funding).
- ² Calculated using the most recent statistics from the DESNZ showing that UK average domestic household consumption is 3,301 kWh per annum (<u>https://bit.ly/45qy2s1</u>).
- ³ Average residents per household 2.4 (<u>https://bit.ly/3HekNxY</u>), Population of Hastings is 93,539 (<u>http://bit.ly/43is875</u>).
- The average electricity consumption of an electric vehicle (EV) is 270.3Wh per mile based on the most popular EV models (https://www.gov.uk/government/statistics/vehicle-licensing-statistics-2023/vehicle-licensing-statistics-2023), and vehicle data from EV Database (https://ev-database.uk/cheatsheet/energy-consumption-electric-car). This means our impact portfolio generation could power 490,111,333 miles travelled by a 'typical' EV. Assuming the UK average annual mileage of 7000, this would power 70,016 EVs (https://www.gov.uk/government/statistical-data-sets/nts09-vehicle-mileage-and-occupancy).
- 5 Carbon reduction is calculated by multiplying the total amount of renewable electricity generated by Thrive's impact portfolio each year by the number of tonnes of carbon which fossil fuels would have produced to generate the same amount of electricity, using DESNZ's "all non-renewable fuels" emissions statistic of 437 tonnes of carbon dioxide per GWh of electricity supplied in the Digest of UK Energy Statistics (July 2024) Table 5.14 ("Estimated carbon dioxide emissions from electricity supplied"). Additionally, we include a conservative estimate of the carbon saved through operating our BESS projects.
- ⁶ As at 31st December 2024
- ⁷ FTE basis excluding apprenticeships
- ⁸ Audited figures for 2024
